In light of the continuous evolution of SARS-CoV-2 pandemic, the AMA Alliance will institute a recommended safety protocol for the Annual Meeting that will be held at the Hyatt Centric Chicago on June 11-14th. Chicago is currently at a medium risk level and changes, or updates may be made to the safety protocol as warranted. https://www.chicago.gov/city/en/sites/covid-19/home/community-transmission-and-risk.html

This protocol applies to all attendees, including guests.

1. All attendees shall be up to date with respect to their COVID-19 vaccinations. “Up to date” corresponds to the CDC recommendations in effect on April 2, 2022*.
   - This means having received their COVID-19 primary series vaccine and, if eligible, (at least) one booster. The vaccine must have been authorized or approved by the FDA.
   - Medical exemptions will be honored. Persons seeking medical exemption please contact annualmeeting@amaalliance.org.

2. All attendees will be provided one COVID-19 rapid antigen test upon arrival. Should you begin to feel symptomatic please utilize the test and quarantine if positive.
   **Attendees are encouraged to test prior to departure from their home to avoid unnecessary travel.**
   Households in the United States are now eligible to order a third round of 8 complimentary COVID-19 rapid antigen tests. Here is the link to order your tests: https://special.usps.com/testkits.

3. All attendees must adhere to any additional requirements adopted by the AMA Alliance Board of Directors, the CDC, the city of Chicago or the state of Illinois in effect at the time of the meeting.

The AMA Alliance is making every effort and taking every precaution to provide you a safe environment during this upcoming annual meeting. Individuals are welcome to wear masks. At of this date, masks are not required, but this is subject to change as the meeting approaches. Please understand we cannot impose any restriction on the Hyatt Centric Chicago Magnificent Mile staff. Your safety is our primary concern, and we thank you for your understanding and compliance.

*Centers for Disease Control and Prevention as of April 2, 2022: A person is up to date with their COVID-19 vaccination if they have received all recommended doses in the primary series and one booster when eligible. Getting a second booster is not necessary to be considered up to date at this time.
